

PRODUCT DATA SHEET

# FINNED ROLLER – BARREL

Our barrel-shaped finned rollers are ideal for curved areas, radii, and hard-to-reach spots in laminating and laminate construction. Made from wear-resistant polyoxymethylene (POM), they are easy to clean and resistant to common resin systems. The barrel shape allows for targeted pressure, ensuring reliable air removal even in complex geometries.

Our painter's frame is a practical addition.

- + Rollers made of POM – robust, wear-resistant, and chemical-resistant
- + Barrel shape – specially for curved areas and complex geometries
- + Targeted pressure for reliable ventilation even in hard-to-reach spots
- + Ensures uniform ventilation of laminates

Finned Roller – Barrel
