DARGEWITZ composites

PRODUCT DATA SHEET

VACUUM INFUSION PLUG CROSS

The Vacuum Infusion Plug Cross enables crossconnections of lines in the infusion process. The flat underside rests under the foil and ensures a tight seal.

Spiral hoses can be routed through the cross opening, while the top provides an opening for a hose to the resin line. This makes the Plug Cross suitable for complex setups with multiple lines.

Our plug adapter represents a practical extension.

+ Connection for resin feed on top; spiral hose is routed through the cross opening
+ Material: PP – chemical-resistant, dimensionally stable
+ Media: epoxy and polyester resin
+ Temperature: -20 °C to +90 °C, briefly +100 °C*

* The temperature resistance depends on the specific application and medium. The customer is responsible for verifying the suitability of the product under their individual operating conditions.
