DARGEWITZ composites

PRODUCT DATA SHEET

VACUUM INFUSION PLUG LINE

The Vacuum Infusion Plug Line provides a straight pass-through for spiral hoses in the infusion setup. Its flat underside rests beneath the film and ensures a secure seal.

Spiral hoses are routed straight through the opening, while a separate provision on top allows for the connection of a resin line – making the Plug Line easy to integrate flexibly into different setups.

Our plug adapter represents a practical extension.

+ Connection for resin feed on top; spiral hose is routed straight through
+ Material: PP – chemical-resistant, dimensionally stable
+ Media: epoxy and polyester resin
+ Temperature: -20 °C to +90 °C, briefly +100 °C*

* The temperature resistance depends on the specific application and medium. The customer is responsible for verifying the suitability of the product under their individual operating conditions.
